TITLE: Hydrogel compositions with an erodible backing member

Summary of Invention Paragraph:

[0136] Suitable acrylate polymers are described above as water-swellaable, water-insoluble polymers, and include by way of example and not limitation, polymers formed from acrylic acid, methacrylic acid, methyl acrylate, ethyl acrylate, methyl methacrylate, ethyl methacrylate, and/or other vinyl monomers. Preferred acrylate polymers are the Eudragit.RTM. copolymers (copolymers of methacrylic acid and methyl methacrylate), such as the Eudragit.RTM. series E, L, S, RL, RS and NE copolymers. As noted above, these Eudragit polymers also find utility as the water-swellaable, water-insoluble polymer component of the hydrogel. Since Eudragit polymers are available in different grades with varying pH dependent solubility and permeability characteristics, the grade used for the erodible backing can be selected to have a lower solubility as compared to the grade used in the hydrogel. For example, if L 100-55 is selected for use in the hydrogel, Eudragit L 100 can be used in the backing; if Eudragit L 100 is used in hydrogel, Eudragit S 100 could be used in the backing; and so forth. In addition, mixtures of Eudragit polymers or mixtures of Eudragit polymers with other polymers and excipients (e.g. buffering agents, pH modulators) may be used to tailor the rate of erosion of the backing member relative to the hydrogel.
